

WATER

Water purification

1. From which different sources does drinking water in Slovakia come?

.....

2. What percentage of the population is connected to the water supply?

.....

3. Which drinking reservoir has the largest drinking water treatment in Slovakia?

.....

4. Find out which water reservoir is closest to your home.

.....

Practical tasks:

5. Let's go with the students to the field or the school's surroundings and look for "traces of water" in the landscape. Let's write down (draw) different forms of relief created by water, e.g. river bed, alluvial gravel, visible erosion on a steep slope, and possibly other interesting things and observations from the water world.

6. If there is a well on the school grounds, let's take samples with the students and send them for analysis. Every year on World Water Day, the Public Health Office of the Slovak Republic offers analysis and advice free of charge.
